

Why have stumps in your way for 15-40 years?

That's how long it takes if you don't call us – but if you do, they can be gone tomorrow.

Save money and the environment

In addition to saving the costs for excavators, dumpsters, transportation and landfill fees, stump grinding is beneficial to the environment. Our method allows the stump to simply return to nature as compost much more quickly, or you can use the chips from the stumps as mulch to keep weeds out of flowerbeds.
